| Verification type | Sensitivity Studies (Grid and Parameter sensitivity) |
| Database reference | SEN-6 |
| Topic / Application | Hydrogen release in tunnels |
| Physics | Deflagration |
| Summary | Paper undertakes a sensitivity analysis of solution outputs to grid size, turbulence models, and turbulence flame speed |
| Description | In this paper CFD modelling techniques are used to simulate deflagration in homogenous, near stoichiometric hydrogen air mixture in a model of a tunnel. The authors undertake a sensitivity study on grid size flame propagation velocity, and turbulence model. |
| Case Title | |
| Authors | I.C. Toliás, A.G. Venetsanos, N. Markatos, C.T. Kiranoudis |
| Year | 2013 |
| Online reference | international journal of hydrogen energy 39 (2014) 2053 8e2 0 5 4 6 |
| Case image |  <p>Example comparing simulated pressure peak.</p> |
| Governing equations | |
| Results | While grid size did not have a material impact on results, flame speed variable was very important. Turbulence modelling only affected the arrival of the pressure peak |
